

KnowledgeNet Decision Support application for Operators

“IO-KNet-O-001” (1.5 day)

What is this course about?

This course is dedicated for operators that are requested to use and interact with KOperator Interface for Decision Support applications. By the end of this course, operators will be able to:

- Understand the decision support system philosophy
- Understand how the KOperator interface works
- Interact with the user interface, to acknowledge the problems and to answer the manual checks questions
- Interact with the Decision Support System and take advantage from the offered guidance in the problems' resolution by following the corrective actions

Who should attend?

This course is primarily designed for control room operators, shift supervisors, and anyone asked to use the KOperator interface in order to interact with the KNet expert system when used for Decision support applications.

What are the prerequisites to this course?

None
