

# KnowledgeNet Hands on Workshop

## *“IO-KNet-E-002” (3 days)*

### What is this course about?

This course is an intermediate level course. It covers the KNet Engine and KNet desktop features and introduces the interactive integrated development environment. A hands-on workshop will enable participants gaining experience with the creation and development of different applications such as:

- Diagnosis and decision support application using the automated root cause analysis technology and the event detection diagrams
- Key Performance Indicators (KPIs) calculation and monitoring
- Workflow applications
- HMI creation (process map, plant topology, and KPIs dashboards)

### Who should attend?

This course is designed for IT, process, and automation engineers, project managers, communications engineers, manufacturing engineers, business systems engineers and advanced technologists. We strongly recommend this course to anyone interested to develop, participate or maintain a project developed with KnowledgeNet.

### What are the prerequisites to this course?

*“IO-KNet-E-001”*
