

KnowledgeNet for developers

“IO-KNet-E-003” (1 day)

What is this course about?

This course is an advanced level course; it covers the customization features offered by KNet. By the end of this course, users will have a complete understanding of how to expand the graphical application objects as well as toolkits to integrate other systems, how to define custom classes, procedures and blocks using C# .NET language. The KnowledgeNet for developers provides interactive, hands-on workshops that enable participants to:

- Create custom classes allowing definition of new objects' types and customized blocks to extend the existing libraries
- Develop the logical relationships between domain objects
- Add procedures in C# .NET language and apply a new logic on objects
- Use KNet SDKs to develop applications that connect to KNet components to gather information and perform operations

Who should attend?

This course is primarily designed for developers and engineers interested by the development of specific applications requiring adding custom plug-ins. We strongly recommend this course to engineers interested by the development or the update of custom applications.

What are the prerequisites to this course?

“IO-KNet-E-001”, “IO-KNet-E-002” & basic knowledge of the .NET environment
